EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with John D. Magluyan on 6/4/2007.

The application has been amended as follows:

In the Abstract:

In line 1: - "comprises" - has been changed to "includes".

In line 2: - "comprised of" - has been changed to "includes".

In line 5: - "comprises" - has been changed to "includes".

2. The following is an examiner's statement of reasons for allowance:

3. Claim 3 is allowable over the art of record because the prior art does not teach or render obvious the entire combination including specifically an insulator layer formed on the detection electrode and an electric conductor layer of a shape having the same direction and the same periodic length as the second solid material portion is formed on the insulator layer.

Claim 4 is allowable over the art of record because the prior art does not teach or render obvious the entire combination including specifically an electric conductor layer of a shape having the same direction and the same periodic length as the second solid

material portion is formed on the detection electrode through an insulator, and no insulator layer exists in a part which the conductor layer is not formed but the signal detection electrode is exposed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Zhao et al. (5,517,123) and Kasahara et al. (4,553,099) disclose electrostatic potential sensors. Tanaka et al. (5,151,659) and Aoki (JP 54107781 A) disclose surface potential measuring systems.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John Zhu whose telephone number is (571) 272-5920. The examiner can normally be reached on M-F, 8-4:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Andrew Hirshfeld can be reached on (571) 272-2168. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
